Chapter 1: Overview

These SirsiDynix BookMyne for Android 3.0.1 Release Notes cover bug fixes, and known issues since BookMyne for Android 3.0, as well as system requirements for version 3.0.1.

BookMyne for Android, a mobile application from SirsiDynix, lets library patrons and users do all of the following:

- Find participating local libraries. Devices with built-in GPS will identify participating libraries that are physically nearby.
- Search the library catalog.
- Renew checked out items.
- Place and cancel holds.
- Check their account details.
- Navigate to their library's home page.
- Find recommended reading from lists of award-winning books, bestsellers, and friends' recommendations from GoodReads.

For questions about BookMyne, users should contact their local library. If necessary, libraries can contact SirsiDynix Client Care with support questions.

These release notes contain the following sections:

- [System requirements](#) on page 3
- [Fixed bugs](#) on page 5
- [Known issues](#) on page 9

Comments and suggestions

SirsiDynix welcomes and appreciates your comments on its documentation. We want to know what you think about our manuals and how we can make them better. If you have comments about these release notes, please send them to docs@sirsidynix.com.

Be sure to include the title and version number of the guide and tell how you used it. Then tell us your feelings about its strengths and weaknesses and any recommendations for improvements.

Chapter 2: System requirements

This section outlines the system requirements for BookMyne for Android 3.0.1.

All libraries planning on allowing patrons to use BookMyne for Android need to use SirsiDynix Symphony Web Services or SirsiDynix Horizon Web Services.

BookMyne for Android requirements

The following Web Services versions are supported by BookMyne for Android:

- Symphony Web Services 3.2
- Horizon Web Services 1.1

Chapter 3: Fixed bugs

This section contains a list of all resolved issues, or fixed bugs, for BookMyne for Android 3.0.1. Resolved issues are problems that SirsiDynix has identified through the testing process and fixed for this release version. The following table includes a list of fixed bugs for version 3.0.1, with their corresponding tracking numbers, and a brief description of each issue and how it has been fixed.

Tracking No.	Summary	Details
IPA-1767	No notification for failed Change PIN attempt	Previously, users at some sites running SirsiDynix Horizon did not see error messages when entering incorrect information into the Change PIN screen in BookMyne for Android. This has been fixed so that all users see an error message when entering incorrect information into the Change PIN screen.
IPA-1833	Information doesn't appear on Personal Info screen	Previously, patrons using BookMyne for Android were unable to see their email and address information in the Personal Info screen. This has been fixed so that patrons can see all of their available personal information in the Personal Info screen.
IPA-1853	Not all book images are loading	Some users were unable to see item images in BookMyne for Android. This has been fixed so that item images display normally.
IPA-1854	Users can't log in	Some users were unable to log in to My Account in BookMyne for Android. This issue was caused by an error in the way the application communicated with SirsiDynix Web Services. This has been fixed so that the affected users can log in to their accounts.
IPA-1855	Issue with placing holds	Patrons at some sites running SirsiDynix Horizon were unable to place holds. This inability was caused by an error in the way BookMyne communicated with Horizon Web Services. This has been fixed so that patrons at all Horizon sites can place holds.

Tracking No.	Summary	Details
IPA-1863	Batch delete causes app to crash	Previously, BookMyne for Android was unable to delete multiple items from My Bookshelf at the same time. When users attempted to delete multiple items, the app deleted only the first item selected and then crashed. This has been fixed so that the app successfully deletes multiple items without crashing.
IPA-1866	App stays on place hold screen	Previously, placing a hold on an item with multiple volumes caused BookMyne for Android to stay on the Place Hold screen. This has been fixed so that BookMyne for Android returns to the item details screen or search results screen after placing a hold.
IPA-1874	BookMyne shows fines in the wrong currency	Previously, fines and fees always displayed with a dollar sign in BookMyne for Android, regardless of the currency symbol set in the fining library's ILS. This has been fixed so that fines and fees display with the currency symbol set in their library's ILS.
IPA-1878	App can no longer move to SD card	Users were unable to move BookMyne for Android to their devices' SD cards because of a problem in the application's Android Manifest file. This has been fixed so that users can move BookMyne to their device's SD cards.
IPA-1883	Unholdable item causes crash	Previously, attempting to place a hold on an item that was not available for holding caused BookMyne for Android to crash. This has been fixed so that BookMyne for Android does not crash and displays an error message when users attempt to place holds on items that are not available for holding.
IPA-1884	ISBNs display as ISBN: #####	Previously, BookMyne for Android had no default text to display in place of an ISBN if an item lacked an ISBN. Instead, it displayed a series of number signs. This has been fixed so that BookMyne for Android displays "ISBN not available" in place of missing ISBNs.

Tracking No.	Summary	Details
IPA-1885	Settings screen labels need to be edited	Previously, the Settings screen in BookMyne for Android had different heading and option names than the screen in BookMyne for iOS. This has been fixed so that the Settings screens in both versions of BookMyne match, making navigation easier and more consistent.
IPA-1888	Item Detail shows library policy name	Previously, BookMyne for Android displayed library policy names rather than library policy descriptions when hitting against SirsiDynix Symphony and library profiles rather than library names when hitting against SirsiDynix Horizon. The abbreviated names were confusing to some users. This has been fixed so that BookMyne displays Symphony library policy descriptions and Horizon library names.
IPA-1890	Due date times don't display correctly	Previously, BookMyne for Android displayed due times in a 12-hour format without the abbreviations a.m. and p.m or a time zone. This has been fixed so that BookMyne displays due date times in a 12-hour format with the abbreviations a.m. and p.m. and the time zone of the library where the item is due.
IPA-1892	My Account info disappears sometimes	Some users at sites running SirsiDynix Horizon were unable to see their My Account information in BookMyne for Android. This was caused by an error in the way BookMyne for Android handled accounts with multiple phone numbers. This has been fixed so that all users at Horizon sites can view their My Account information.

Tracking No.	Summary	Details
IPA-1894	Some searches don't work correctly	Some users of BookMyne for Android saw identical search results from different searches with different keywords. This problem was caused by a failure to completely clear old search information. This has been fixed so that all searches return results relevant to their keywords.
IPA-1909	Library logo doesn't show in library info screen	When users performed a library search, BookMyne for Android failed to display library logos on library info pages. This has been fixed so that users can see library logos on the library info pages during their library searches. For more information on library search, see "Finding your library" in the BookMyne patron help.
IPA-1911	Enrichment labels use policy name, not description	Previously, BookMyne for Android displayed terse, abbreviated names for some enriched content labels. These labels were sometimes unintuitive and could be confusing for users. This has been fixed so that BookMyne for Android displays useful enriched content labels.
IPA-1916	Highlight items that cause notifications on the My Account view	Previously, BookMyne for Android displayed notification badges on the home screen but did not highlight the reason for the badges in My Account. This made it difficult for users to find issues with their accounts, such as overdue books. This has been fixed so that the reasons for any notifications are highlighted in red on the My Account screen. For more information on notification badges, see "Using notification badges" in the BookMyne patron help.

Chapter 4: Known issues

This section contains information about known issues and possible work arounds in version 3.0.1. Known issues are reported issues that either do not affect the software or have not been fixed in this version. The following table includes known issues with version 3.0.1.

Tracking No.	Summary	Details / Work around
IPA-1848	Android: Menu buttons disappear	The on-screen menu button sometimes disappears in BookMyne for Android. Users can use their devices' physical menu key as a workaround.
IPA-1849	Android: No error with login failure	If a user's library account password is changed through a service outside of BookMyne for Android, BookMyne will fail to display an error message if the user tries to log in using his or her old password.
IPA-1849	Policy names display instead of policy descriptions	Due to a known issue with SirsiDynix Symphony Web Services, BookMyne displays location policy names rather than location policy descriptions in the item details screen. The abbreviated location policy names can be confusing to users.
